

VPMS EventLogger

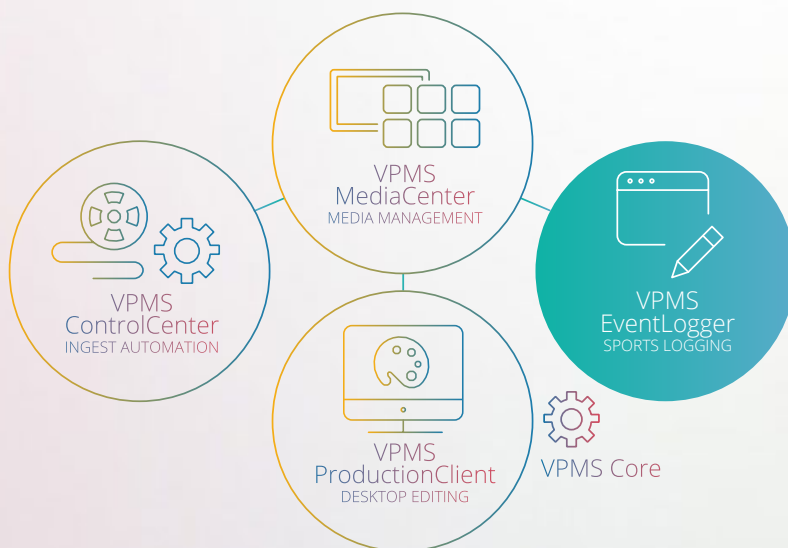

Sports Logging

Efficient Sports Logging Redefined

Designed for the specific needs of live sports environments, the VPMS EventLogger delivers as a versatile and highly customizable tool for efficient and ultra-fast logging.

Fully Integrated Solution

The VPMS EventLogger is fully integrated with the core MAM system. Log sheets and events are stored as VPMS data, enabling users to search and use events in workflows and export the data to third-party systems.

Key Facts

- Web-based sports logging application
- Log live, time-shifted, or archived material
- Flexible schema structure for keyword catalogues and keyword associations
- Multiple log modes for efficient logging operations
- Timeline view of logged events
- Custom and master keywords
- Import and export of log sheets from/to third-party systems
- Support for multiple concurrent users
- Multiple log sheets per asset

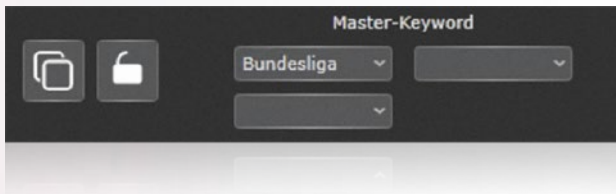

Versatile Event Data Structure

- Keyword/category relationship for efficient searches
- Event middle markers define the actual event timecode
- Automatically calculated pre and post-roll values are based on customizable keyword combinations
- Keyframe per event
- Custom keywords

#	In	Event	OUT	Lineup_Bayern_Muenchen	Lineup_FC_Porto	Action	Outcome	Master
0	1:00:45	1:00:50	1:00:57	Contact	Good	...
1	1:00:44	1:00:50	1:00:57	Tackle	Pass	Bad
2	1:00:50	1:00:55	1:00:59	Contact
3	1:00:52	1:00:57	1:00:59	Shot	Bad	...
4	1:00:54	1:00:57	1:00:59	Funny	...

Efficient Logging Modes

- Designed for high speed environments
- Locked mode: Group keywords according to defined schema associations, for instance "Player Name" + "Action"
- Single-Mode: Select one keyword only
- Multi-select: Select freely from all keywords
- Master Keywords for automatic logging
- Logging on live material (real-time timecode)
- Time-shifted material (while growing) and archived material (based on the LoRes within VPMS)

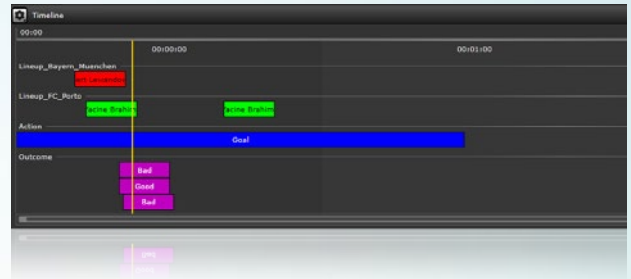

Multi-User Friendly

- Support for multiple users working in parallel on the same asset/log sheet
- Live update of events across all logger instances
- Support for multiple log sheets per asset

Timeline

- Selected keyword is shown on player timeline
- The log sheet timeline shows all events color coded
- Timeline supports live update during video playback

Flexible Schema XML Configuration

- Log session-specific sports/events based on configuration
- Define keyword catalogs and associations between keywords (e.g. team names vs. actions categories)
- User-specific keyboard shortcuts
- Keyword-specific pre/post roll values

Import and Export from and to 3rd Party Systems

- Import existing log sheets from major vendors
- Export events (including sub clips) and complete log sheets to 3rd parties
